

mimio® Stimulus Plan: Stimulate students' minds for less

You know effective teaching is an active process. That's why you increasingly rely on interactive technology. But with today's limited budgets, how can you afford to equip multiple classrooms with this exciting technology? Turn to mimio® interactive classroom technology solutions.

With mimio interactive solutions, you can triple the number of interactive classrooms per dollar.

Unlike conventional interactive whiteboards, mimio puts its technology on the whiteboard, not in the whiteboard. Even better, the system works with your existing projector and computer and transforms it into a full-featured, interactive whiteboard.

The equipment and installation savings lets you convert three times the number classrooms into interactive classrooms over conventional interactive whiteboard systems.

mimio Interactive is classroom and kid friendly.

The lightweight system moves easily from classroom to classroom, setting up quickly. You create engaging multimedia lessons with ease, and control everything from the whiteboard. You can even record your dry-erase color notes and drawings with our clever mimio Capture Kit.

mimio is a classroom favorite of teachers and administrators, and its intuitive design encourages children of all ages to use it. No wonder Scholastic Administrator named mimio a Best in Tech 2008-2009 for whiteboard solutions.

When looking at your budget, look at mimio.
