Bringing powerful computing to a variety of environments

Companies today depend on an increasingly dispersed, mobile workforce. Employees find themselves needing computing power and network connectivity in more places than ever before: during a sales demo, at the client site, in indoor and outdoor environments, at the office, the airport – even in coffee shops.

Mobile workers demand the latest information at their fingertips on a device designed to seamlessly support their work habits. Traditional laptops are too heavy to carry around all day and are awkward for accessing and entering data while walking or standing. PDA devices fail to provide enough performance to tackle a wide range of applications or the functionality to serve as stand-alone computers. That's why mobile professionals are embracing the mobility, versatility and power of Motion Tablet PCs.

Motion Tablet PCs: Innovative technology designed for the mobile workforce

The lightweight, ultra-mobile Motion Tablet PC, with Intel® Centrino™ Mobile Technology or Intel® Celeron® M technology, provides insurance adjusters, realtors, field service and sales representatives and other mobile professionals access to real-time information anywhere – streamlining workflow and increasing productivity. The combination of Motion's thin and light Tablet PC design, integrated high-speed wireless networking and Bluetooth® connectivity offers the freedom of untethered mobility like never before.

Mobile professionals can now be fully productive in hallways, at their desks and even in the field. Using digital ink, they easily handwrite e-mails, take notes and draw graphs. They dictate audio notes using Motion's innovative Speak Anywhere™ audio technology and share them with colleagues from any of the myriad wireless hotspots around the world. The 12.1" screen with wide viewing angles or the Motion View Anywhere™ display option represent the pinnacle of versatile viewing, even outside.

In an ever increasing mobile world, protecting critical data is vital. Motion's unique, integrated fingerprint reader, with its natural and ergonomic design, offers a simple and convenient way to provide single-step, global password management so that sensitive data remains secure.

Combining standard Microsoft® Windows®-based applications with the power of the internet in any environment, Motion Tablet PCs enhance the flow of information – without technology getting in the way.

MOTION TABLET PCs BOOST MOBILE PRODUCTIVITY

Pure mobility, versatility and power

Motion Tablet PCs automate much of the paperwork that employees currently complete manually. Information can be entered directly into sales, HR and service applications, eliminating unnecessary paperwork and transcription. Paper forms, like time sheets and mileage reimbursement forms, are upgraded to ink-enabled, electronic forms. Staff can work with the forms using a digital pen, right on the screen and the Tablet PC converts their handwriting into searchable text. Remote staff can also capture customer signatures while in the field, reducing the turnaround time for closing critical deals.

Real estate agents can instantly access multimedia web content or videos, verify available options and even complete paperwork and filings.

MOBILE WORKFORCE

sales and service.

real estate.

insurance.

The ability to access real-time product information while at the customer site improves productivity and ensures customer satisfaction.

Effortless computing on the road, in the office and everywhere in-between

Back at their desks or in their home offices, mobile professionals use Motion Tablet PCs with FlexDock docking stations as their primary computers to perform their daily work. With Motion's wide variety of expansion options, the Motion Tablet PC is a full-featured, versatile solution and a compelling replacement for either a laptop or desktop PC.

Motion Tablet PCs bring the power of real-time information to the field – streamlining workflow, minimizing errors, decreasing costs and enhancing the effectiveness of the field force. Most importantly, Motion Tablet PCs enable mobile professionals to work productively, giving them even more time to grow their businesses.
