meetingminder™

Our Touch interactive room signs are a perfect way for organizations to extend their AxisTV digital signage.

- See room status instantly with availability lights
- Use PoE+ via network switch or injector
- Choose from 10- or 15-inch models
- Easily recess or surface mount out of the box
- Display digital signage content, including alerts
- Book meetings right at the room sign

Our powerful AxisTV content management software lets you create, import, schedule and publish a wide range of digital media, alerts and calendar schedules to your room signs.

You'll see room availability at a glance with our large on-screen status light, and availability lights on each side that shine green when the room is available and red when it's not.

Touch interactive room signs show bookings from a variety of popular calendar data sources. Since all of our room signs can be fed by a single scheduling application, space booking is the same whether people are in the office, at home or on the road. The calendar is consistent and up to date everywhere, no matter who changes it or from where.

Touch room signs support data from:

If you're using Microsoft Exchange or EMS Software, you can create a walk-up reservation with only a few touches to the screen. To schedule the room, just touch "Reserve" and set the time and meeting length. Optionally, a four-digit PIN can be set to protect your reservation from being erroneously canceled or modified. Walk-up reservations are immediately shared with your calendar application to avoid double-bookings.

The "Confirm Meeting" button lets participants start the meeting to confirm the room is being used at the scheduled time. If no one confirms the meeting within a set number of minutes, the booking will automatically end and the room will show as available, freeing up space in your building and calendar.

For rooms where walk-up reservations aren't appropriate, any Touch room sign can run in non-interactive mode, so digital signage content and schedules are displayed full-screen. Interactive and non-interactive room signs can also be used together in the same facility.

These Power over Ethernet (PoE+) room signs allow you to run one Ethernet cable to the room sign to supply both power and data, so you don't have to worry about concealing power bricks.

Both our 10- and 15-inch Touch models can be surface mounted or recessed in walls, and are ready to be mounted right out of the box without any additional hardware.

MeetingMinder™ Touch10 Mounted - Room available

MeetingMinder™ Touch10
Display size: 10.1" viewable area and availability lights
Resolution: 1024 x 768 (4:3 aspect ratio)
Dimensions: 11.125w x 8.375h x 1.75d inches
