

DISCOVER THE BEST SOLUTION FOR YOUR MOBILE DEVICE MANAGEMENT NEEDS

There are various considerations that can influence wireless infrastructure requirements

- 1 Application management — Deploys, updates and wipes applications
- 2 Policy management — Develops and controls the operational aspects of the mobile network
- 3 Inventory management — Tracks licenses, version control, provisioning and support
- 4 Security management — Enforces password settings, encryption, and remote lock and wipe

With all of the different variables, it can seem daunting to choose a right-fit solution for your unique needs. There's a sea of mobile device management vendors that approach the discipline in different ways. But you don't have to do it alone. Howard has identified three brands and solutions that can help you.

HOWARD

XIRRUS
High Performance Wireless Networks

Management

AirWatch's Mobile Device Management (MDM) solution enables you to manage large-scale deployments of mobile devices.

Tablets

Engage students by allowing them to work from a mobile device in the classroom. Howard offers a wide range of brand-name convertible and slate.

Wireless

Xirrus offers customizable solutions for solving the guest access, device onboarding, and security challenges of BYOD.

AV INSTALLATION SERVICES

Services include: Design and design build systems, service contracts, consultation services, custom Crestron, Extron, and Pixie programming.

Venues include: Classroom, auditoriums, board rooms, stadiums, public address, and public displays.

Engineering and Installation Departments certified in Industry Standard Certifications such as Crestron, Extron, CTS, Polycom and Mimio.

NETWORK SERVICES

Howard Network Services has the ability to design and deploy enterprise level wired and wireless networks.

We have our own staff of Cisco and Microsoft® certified engineers, as well as Extreme Networks Associates, Xirrus wireless professionals, Enterasys and VMWare certified professionals with A+ and Network+ credentials. Our team can help with network assessments and wireless surveys in the planning stages, then install and configure your network to your specifications, within your time frame. When you think Network Services—think Howard!
