

PowerTower PATENT PENDING

Why should you choose PowerTower?

The PowerTower is a simple, smart-system for storing and charging laptops and tablets. Each unit consists of a tower, power strip, and shelving. The PowerTower is the simplest and most cost effective way to manage multiple mobile computerized devices. The durable storage system provides a space-saving and open design. This allows for quick and easy inventorying of electronic devices, while taking up a small footprint. The shelves can be labeled for uncomplicated referencing. The design also allows for positive cable management. Each shelf is designed to house one easily located plug for its designated device.

There is no need to worry about adapters or purchase aftermarket connections. The back of the unit encloses space for a device's factory power supply. The power strip supplied with the unit ensures that there is just one electrical connection to make.

The PowerTower has a sturdy construction of powder coated aluminum that is strong enough to hold the weight of multiple personal electronic devices without the risk of falling. In addition, the lightweight nature of aluminum makes installation of the PowerTower a breeze. Expandable and upgradable capacities of the design make this unit work for multiple situations. The original PowerTower can hold and charge up to 16 devices at one time, but it also comes in smaller units. It is available in wall-mount or desktop configurations. It also has a lockable feature that can be added to the unit for secure environments.
