

Mobile Device Charging Solutions

Mobile Device Charging Solutions

Mobile device charging solutions provide a secure way to charge mobile devices, giving patients and providers one less thing to worry about. Secure charging lockers located in public areas, such as lobbies, cafeterias, nursing stations, waiting and patient care areas, provide a safe place for guests and caregivers to charge their mobile devices and store small personal items.

Charging Solutions have many benefits in healthcare including:

Staff Benefits

Charging Lockers:

- Provide a secure location for storing and charging staff point-of-care devices
- Reduce the number of devices that are lost or go missing each year
- Help protect against data theft
- Reduce liability associated with handling patient devices
- Charge multiple devices at one time for increased power efficiency

Charging Stations (non-locking):

- Reduce facility phone usage that is not work-related by making charging stations available for employees to use with their own devices
- Increases support for mobile infrastructure and supports staff response

Patient Benefits

Charging Lockers:

- Provide a secure location for storing and charging patient mobile devices during surgery and/or hospital stay
- Reduce physical loss or device theft
- Increase patient satisfaction and improve the patient experience
- Promote patient safety by keeping patients from using outlets designed for medical devices
- Enable patients to update family members and employers, make arrangements for discharge, and more.

Charging Stations (non-locking):

- Keep phones charged—no waiting in room to charge their device
- Enable continual use of digital devices for communication or entertainment
- Facilitate a better overall experience at a facility, especially if there is a wait
- Increase patient satisfaction and improve the patient's experience

Charging Locker

Nurse's Station

Charging lockers located in nursing stations provide a safe place to charge and store electronic devices for employees. This ensures that devices are fully charged, accessible, and ready to use at any time, which, in turn, helps streamline workflows and improve productivity. Some charging units offer an extra level of security by providing a full audit log, coded access, or RFID access, which lowers your per-employee cost by reducing the number of lost or stolen devices. Patients who are on-site for outpatient procedures and need somewhere to store their devices or valuables can benefit from these lockers, too.

Floor Stand Charging Station

Waiting Room/Common Area

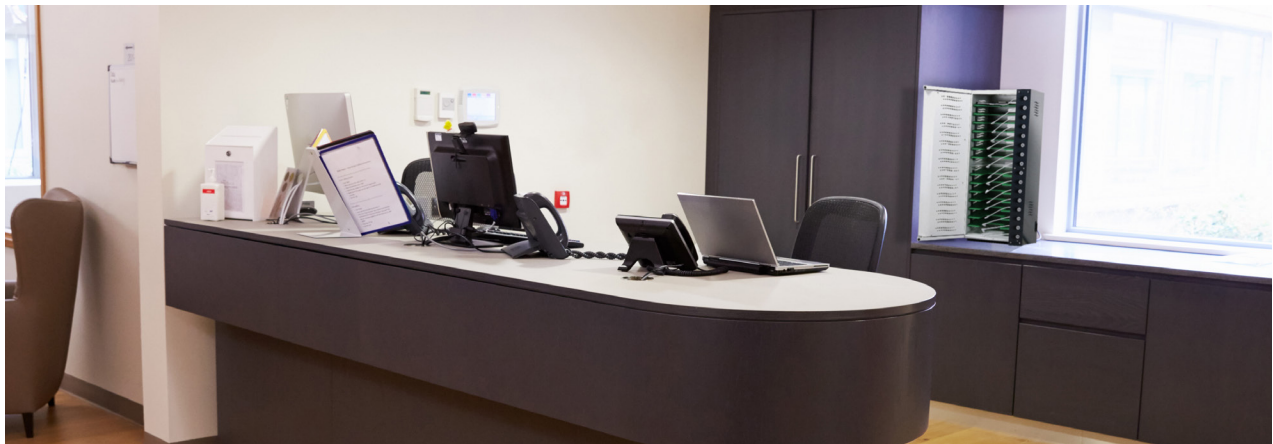

Give visitors a safe, convenient way to recharge all their mobile devices with secure, purpose-built charging lockers and charging stations. They are durable, designed for high-traffic environments, and a safe alternative to using facility outlets meant for medical equipment. Placing these easy-to-use charging solutions in waiting rooms or common areas of your facility allows guests to use their devices without having to worry about depleting the battery. When a device does need charging, nurses and receptionists can simply direct visitors to the nearest charging station.

Mini Charging Hub

Patient Room

Today, more than ever, patient satisfaction significantly impacts the business success of healthcare organizations. By providing more of what's important to your patients, your facility will also improve their overall experience. In addition to using their cell phones to stay in touch with friends and relatives, patients often use them for news and entertainment, so keeping them charged is essential. Providing patients with a secure charging solution adds to their sense of well-being and allow them to continue to interact without interruption.
