

Virtualization Solutions

Virtualization Solutions

From servers to desktops, virtualization is the single most effective way to minimize IT expenses, increase uptime, and boost energy efficiency. Running multiple operating systems and applications on a single server or desktop computer results in higher productivity; it speeds and simplifies IT management, maintenance, and deployment of new applications. With potential savings of 50% or more in overall IT costs, total cost of ownership is significantly decreased. Howard's Professional Services team can guide you in virtualization assessment, optimization, and migration services, so you can do more—much more—with less.

Cloud

Consider the benefits of cloud computing—reduced IT costs, increased scalability for business expansion, more efficient collaboration, flexibility of work practices, automatic updates—just to name a few.

Desktop Virtualization

Deploy desktops faster; experience less downtime; reduce equipment acquisition, management, and operating costs through desktop virtualization. In short, get more from your existing desktop assets!

Storage

Howard offers networked solutions for file sharing, virtualization, storage management, and surveillance applications customized to fit your specific needs.

Backup & Data Recovery

Having an effective recovery plan in the event of system failure or a cyberattack is crucial to the successful operation of your organization, and Howard can help.

Server Virtualization

Do more with less and save! Save on hardware costs, reduce energy consumption, and free up valuable server rack space—see what you can save with server virtualization.

Virtual Desktop Infrastructure

Enable end users to access all of their virtual desktops, applications, and online services through a single digital workspace. It's simple, and it's smart!

Servers

Reinforce network security, reduce downtime, and increase overall productivity with server solutions that provide a scalable architecture for future expansion. Howard offers pedestal and rack-mount configurations with customizable performance options to suit your specific needs.

Software-Defined Storage

Transform your data storage infrastructure with software-defined storage. It's dynamic and flexible, and it supports your digital workload more efficiently than traditional storage models.
