

Software Solutions

Software Solutions

Improve productivity, protect and manage your assets more effectively; automate daily tasks, and collaborate worldwide—all it takes is the right software! Howard offers a huge selection of software solutions, including applications for information management and resource monitoring; data backup, and network security; event logging, voice recognition, and 3D animation. The right software gives you instant access to vital information, so you spend less time managing data and more time focused on patient care.

Creativity, Design, & Page Layout

Get the response you're looking for with appealing newsletters, professional program notifications, and engaging community announcements. All it takes is a little creativity and the right software!

Collaboration & Productivity

Software solutions connect clinicians, administrators and patients. This collaborative approach to patient care enhances productivity, improves diagnostic services, and contributes to a more informed decision-making process.

Antivirus

Traditional, full-scale, antivirus tools give you the ability to search for, detect, and remove software viruses and other malicious programs like worms, Trojan horses, and adware.

Courseware & Training

Enhance your training objectives with professional courseware— instruction for skillsets such as time management, decision making and effective communication; conflict resolution, workplace etiquette, and much more.

Animation & 3D

Protect and manage your assets more effectively with the right software! Howard offers a huge selection of software solutions, including applications for design and layout, training, voice recognition, and 3D animation.

Music & Video

Patient education videos offer an especially effective method for giving healthcare instruction. They enable patients to process important health-related information at a pace that is comfortable for them, which aids in decision making and encourages compliance.

Backup, Utility, & Recovery

Industry-specific backup, utility and recovery software solutions are critical to the smooth running of any healthcare facility, as it has a direct impact on the successful provision of patient care and is essential to the financial well-being of a practice.

IT & Network Management

Use proven management solutions to track and manage asset status, control access to data, and ensure optimal performance for computers handling critical patient information.

Security

Protect and manage your assets more effectively with software solutions that secure your network and data against systems failure and sophisticated cyber attacks. It's a layer of protection you can't do without.

Replication

Software-based replication technology maintains an up-to-date copy of your operating environment without taxing the primary system or network bandwidth; it generally costs less than hardware-based replication and offers a higher degree of flexibility.

Virtualization

Running multiple operating systems on a single server or desktop computer increases uptime, simplifies IT management, minimizes expenses, and accelerates deployment of new applications.
