Easily replace traditional fluorescent with high-quality LED lighting solutions

Howard Industries is an expert in the lighting field. We are continually upgrading existing products and introducing new ones in order to provide leading-edge products that meet the ever-changing demands of the lighting market. Our two manufacturing facilities, dedicated to lighting products, allow us to offer a complete line of fixtures, lamps, and ballasts. Our fixture line includes a full range of modern, high-efficiency LED products, most of which meet the latest DLC requirements.

Upgraded Lighting for Healthcare Facilities

Replacing existing fluorescent fixtures with LED is a quick and simple way to reduce power consumption costs while also providing high-quality lighting. Lighting a medical facility, typically, accounts for 30% of the total electrical consumption in healthcare buildings.

Product Applications

Center baskets, flat panels, and retrofit kits are simple-to-install fixtures that can easily replace traditional fluorescent lighting. Low-power, high-quality LED lamps are also a sound replacement option for existing fixtures.

Reduce fixture count in buildings, yet keep the Lumens necessary in a healthcare facility

Decrease cooling costs in your buildings with lower heat-generating LED fixtures

Increase outdoor building security by adding brighter lighting to your walkways and parking areas
