Mirapoint ComplianceVault™
CV100

MIRAPOINT DELIVERS PROVEN, APPLIANCE-BASED SOLUTIONS WITH CARRIER GRADE RELIABILITY TO BUILD A SECURE MESSAGING INFRASTRUCTURE WITH CENTRALIZED CONTROL AND SIMPLIFIED MANAGEMENT — ALL AT A DRAMATICALLY LOWER COST.

PRODUCT DATA SHEET

- Simple appliance approach to email archival allows plug and play deployment

- All storage hardware, software and operating system in a single 1U chassis

- Simple POP/IMAP interface to the journal mailbox(es) allows the archival system to work in the background without disrupting email system performance

- Simple web-based user and search interface for all functions make the ComplianceVault easy-to-use and secure

- External tape library system sold separately (strongly recommended)

The Email Archival Challenge

If legal compliance or corporate governance policies compel your organization to preserve all email messages, you may spend hundreds of thousands of dollars or more on archival software, servers and the storage necessary to retain all of the email messages, often including messages containing spam or other unwanted content. Some companies, faced with the potential costs of email archival, simply adopt a policy of purging all email beyond a certain date, putting the organization at even greater risk.

The Mirapoint ComplianceVault Solution

Mirapoint has made email archiving an order of magnitude easier and more cost effective with ComplianceVault™, which includes everything you need to archive your email — including application software, server hardware and storage system, all in one easy-to-deploy appliance. Mirapoint's ComplianceVault passively and discretely copies all messages sent or received within an organization, indexes the messages and places them into a permanent archive that is searchable.

Mirapoint's policy-driven email archival approach allows administrators to selectively group messages by division or department, sender and receiver, and external or internal messages only. In addition, Mirapoint's anti-spam and anti-virus technology can be used to greatly reduce the number of messages indexed by blocking these messages at the edge. The entire archival and search process can be conducted securely without alerting or disrupting users. The ComplianceVault's high-speed search capabilities allow reviewers to discover messages based on sender, recipient, subject, keyword and date range. Marked messages can then be securely exported in the common .eml format. The archive message base is not modifiable, and all actions by administrators or by the ComplianceVault itself are recorded in a secure audit log.

How the Mirapoint ComplianceVault Solution Works

In a simple setup process, special archival journal interfaces are activated on the mail server. A variety of filters can be applied to these interfaces to journal only specific types of messages or to place messages with differing content or headers into different secure folder locations. One or more ComplianceVaults log into these journal folders at pre-set intervals to collect the messages for indexing and storage. Messages indexed and stored in the archival message base can be automatically backed up to tape at regular intervals (typically nightly). Messages on the tape can be secured using private 256-bit encryption. Once the messages are indexed and archived to tape, the original messages are deleted from the archival folder that is on the mail server, completing the archival process.

Features and Benefits

Single box solution for email archiving

ComplianceVault combines all of the hardware and software you need for a plug-and-play archival solution into a single appliance. Competitive solutions require you to piece together a solution by buying server hardware, storage, software and operating system separately.

Multi-platform compatibility

The Mirapoint ComplianceVault works with all leading mail platforms including Mirapoint Message Server, Microsoft Exchange, IBM/Lotus Notes, as well as POP3/IMAP mail servers.

Hardened Operating System

The ComplianceVault employs a hardened operating system that is optimized for performance and reliability - with no known exploits.

Technical Specifications

SPECIFICATIONS	
Chassis	1U rack mount server - 1.70" height, 16.93" width, 26.46" (43.3mm x 430mm x 672mm)
Processor	Single Pentium 4, 3.0 GHz
Memory	1 GB
Networking	Dual integrated 1 Gb/s Ethernet
Storage Capacity	1 Terabyte SATA
Tape Interface	Supports Sony StorStation AIT-2 and AIT-3 Tape Libraries
Messaging Platforms	Mirapoint Message Server, Microsoft Exchange, IBM/Lotus, POP3/IMAP
WARRANTY	**Hardware:** 1 year warranty **Software:** 90 day warranty includes email only support and updates **Support:** Annual contracts offered for 9x5 or 24x7 support including software updates
