Focus Users' Conference | **GOOGLE** for Education Workshop

Google for Education has transformed Education by creating a collaborative environment where students and teachers can work in real time. It's no surprise that Chromebooks hold over 50% of the market share and are the Number 1 K-12 device in the US.

So, how exactly does this work? Stop by the HOWARDedu Booth to learn about the best practices of the Chrome Device Management license, how to put devices in kiosk mode and public session mode, and the practical applications for both. We will also discuss how the introduction of Android Apps running on Chrome, Digital Signage, and Video Conferencing can be useful in Education. During our time together we will discuss ease of deployment with Chrome devices as well as managing the Operating System and Firmware updates. Come prepared to ask questions and learn about the many ways to integrate Google into your school.

MobileMind | **SERVICES**

| SETUP | OPTIMIZATION | EVALUATION | TRAINING |

In Education, adopting mobile technology and moving to the cloud have tremendous benefits, but it's a big change. To succeed, these initiatives require services designed for both IT and Instruction. Whether you are new or experienced with Google for Education products, the MobileMind service package will ensure that your Google environment is safe, optimized, and fully utilized by your schools.
