

# Rave 911 Suite Provides Life-Saving Device Location to 9-1-1 via RapidSOS

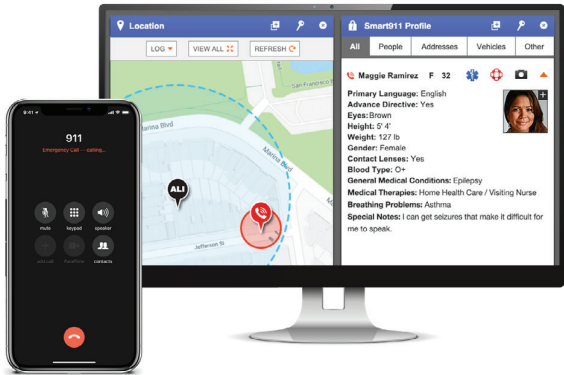

Fast and accurate location for 9-1-1 calls directly from Apple devices.

Delayed, inaccurate, or unreliable mobile location data is a problem for every 9-1-1 center today. Rave is proud to partner with RapidSOS to bring life-saving Apple device location data to 9-1-1 call takers and first responders. With the Rave 911 Suite, you will have access to the best possible Apple caller location available when it matters the most.

After extensive testing and research, Rave's 911 Suite features an integration with the RapidSOS NG911 Clearinghouse to optimize how 9-1-1 can quickly and securely access Apple device location.

Apple phones will send fast and accurate device location to the RapidSOS NG911 Clearinghouse when a user dials 9-1-1. This is part of the phone's Operating System – users do not need to take any additional steps for their location to be shared during a 9-1-1 call. No app or profile needed. The location will be immediately available in the Rave 911 Suite along with the ALI location.

**Fast, accurate location data from Apple devices is coming. Schedule a demo of Rave 911 Suite today.**

*"Rave's innovative 911 Suite brings additional caller data to 911 centers nationwide. Thanks to this announcement we will be able to bring life-saving Apple device location data to Rave customers using transformative NG911 Technology."*
