

Modern Data Protection | **#1 VM Backup**
Built for Virtualization

Veeam Backup Management Suite *for VMware and Hyper-V*

Powerful, easy-to-use and affordable data protection and virtualization management

"We call it our Swiss Army knife... Veeam Backup Management Suite handles a variety of tasks, which makes protecting and managing our virtual environment so much easier and saves us roughly 40 hours each week."

Mark Sulzen
Vice President
Information Technology
SmartDraw Software, LLC

"Veeam Backup Management Suite works brilliantly for us ... reliable backups, quick recovery and good reporting."

Abdullah Al Marzouqi
Manager, Systems Support
GASCO

"Veeam gives us the confidence to continue virtualizing critical systems and applications."

Lukasz Rakowski
Manager, IT department
TK Telekom

Combining the award-winning virtualization expertise of Veeam® Backup & Replication™ and Veeam ONE™, Veeam Backup Management Suite™ delivers powerful and proven data protection, monitoring and reporting for VMware and Hyper-V.

Modern Data Protection—Built for Virtualization

Virtual environments bring unique challenges and need solutions built specifically for virtualization. Leveraging the capabilities and benefits of the virtual environment, Veeam Backup Management Suite helps organizations modernize their data protection strategy while mitigating daily management risks.

Powerful, easy-to-use and affordable

Shrinking backup windows, exploding data volumes, and escalating performance and availability demands make effective protection and management of your virtual infrastructure more important than ever. With Veeam Backup Management Suite, you have the power and ease of a single solution that addresses your most important needs:

- 2-in-1: backup and replication
- Real-time monitoring of backup and virtual infrastructures
- Documentation and management reporting
- Capacity planning and more!

Advanced monitoring, reporting and capacity planning for backup

Veeam Backup Management Suite provides advanced capabilities and complete visibility of the backup and virtual infrastructures. With integrated monitoring, advanced alerting, automated reporting and more, Veeam Backup Management Suite is a comprehensive and enhanced data protection solution for your virtual environment.

Veeam Backup & Replication and Veeam ONE have been verified by VMware as VMware Ready

Microsoft Partner

Gold Application Development
Gold Management and Virtualization

Multi-hypervisor support

Veeam Backup Management Suite supports VMware and Hyper-V in a single solution, so you can protect and manage all your VMs from the same consoles without having to spend time and effort to deploy and manage separate tools for each hypervisor. You can even swap Veeam licenses between hypervisors at no extra charge, giving you the platform flexibility you need.

Supported platforms

VMware infrastructure

Platforms:

- vSphere 4.x - 5.5
- VMware Infrastructure 3.x (VI3)

Hosts:

- ESXi 3.5 - 5.5
- ESX 3.5 and 4.x

Software:

- vCenter Server 4.x - 5.5 (optional)
- Virtual Center 2.5 (optional)
- vCloud Director 5.1 - 5.5 (optional)

Virtual Machines:

- All operating systems supported by VMware
- Any application
- Any file system

Microsoft Hyper-V infrastructure

Hosts:

- Windows Server 2012 Hyper-V (through R2)
- Windows Hyper-V 2008 R2 SP1 (including core installation)
- Microsoft Hyper-V Server 2012 (through R2), 2008 R2 SP1 (free version of Hyper-V)

Software:

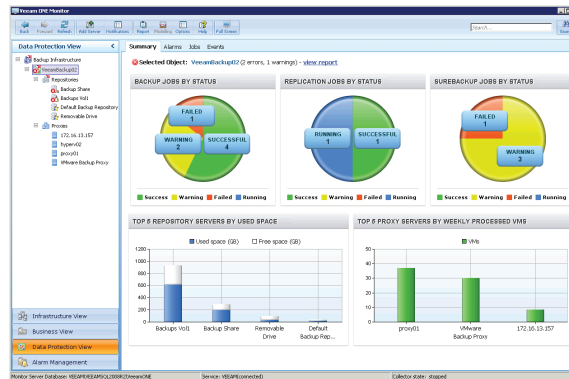

- Microsoft System Center 2012 (through R2) Virtual Machine Manager (optional)
- Microsoft System Center 2008 R2 Virtual Machine Manager (optional)

Virtual Machines:

- All OSs supported by Microsoft Hyper-V
- Any application
- Any file system

Better together

Veeam Backup Management Suite integrates Veeam Backup & Replication with the built-in intelligence and powerful capabilities of Veeam ONE to offer extended monitoring, reporting and capacity planning support for backup.

At-a-glance views of backup status, storage and servers.

24x7 monitoring of the backup infrastructure and other advanced features let you easily identify unprotected VMs, optimize backup resources, automatically document backup status and more. Veeam Backup Management Suite is the right solution for ensuring the protection, performance and availability of virtual environments of all sizes.

What's inside?

Veeam Backup & Replication provides fast, flexible and reliable recovery of virtualized applications and data.

- **2-in-1: backup and replication**—unifying backup and replication in a single data protection solution
- **Built-in deduplication**—cut backup storage requirements up to 75% by compressing backup and network traffic and eliminating duplicate blocks of data
- **Near-continuous data protection**—capture changes and update VM images as often as every few minutes for on-site and off-site replication

Veeam ONE delivers powerful, easy-to-use and affordable monitoring, reporting and capacity planning for virtual and backup infrastructures:

- **Real-time monitoring**—24x7 real-time monitoring and alerting, with built-in intelligence for fast troubleshooting and problem resolution
- **Documentation and management reporting**—pre-deployment analysis of backup requirements, complete documentation of the structure and state of your virtual and backup infrastructures, plus automated and on-demand reporting
- **Capacity planning**—trend analysis, provisioning recommendations, what-if modeling and more
- **Business categorization**—technical- and business-oriented views of your virtual environment

Editions

Veeam Backup Management Suite is offered in three editions, with data protection capabilities that correspond to the Standard, Enterprise and Enterprise *Plus* editions of Veeam Backup & Replication. Veeam Backup Management Suite is also offered in a Cloud Edition that supports more than 15 leading public clouds and open cloud storage platforms. With all these options, it's easy to find the right solution that meets your needs and budget.
