#1 VM Backup

Veeam Management Pack for VMware
# Extend Microsoft System Center to manage VMware

Veeam® Management Pack™ (MP) for VMware extends Microsoft System Center with deep VMware vSphere monitoring, reporting and capacity planning, allowing app-to-metal management from one console.

In addition, for customers who also have Veeam Backup & Replication™, Veeam MP discovers the Veeam backup environment to provide monitoring, reporting and capacity planning for the backup infrastructure, directly in the Operations Manager console.

Gain deeper VMware visibility

As adoption of VMware technology continues to grow, organizations with Microsoft System Center are looking for more efficient ways to monitor and manage their VMware and physical infrastructures. Many find themselves using multiple monitoring tools that introduce inefficiencies and blind spots in the datacenter, requiring teams to manually compare performance information to solve problems.

With Veeam MP you can leverage your existing investment in System Center to give you deep visibility of the VMware vSphere layer of your datacenter. Natively, System Center shows what's going on with your applications and operating systems. And when you add Veeam MP, you extend the monitoring capabilities of System Center to include your vSphere virtual machines (VMs), VMware vSphere hosts and all hardware, storage and network resources. System Center—together with Veeam MP—provides true app-to-metal visibility. Virtualization visibility in System Center doesn't get any better than this!

Working together, Microsoft System Center's monitoring capabilities (shown in blue) plus Veeam Management Pack's monitoring capabilities (shown in green) provide app-to-metal visibility from one console.

> "If your goal is to monitor VMware through Microsoft System Center, the Veeam MP is the most detailed and precise product on the market…"
>

> **Virtualization Lead**
> **Vestas Wind Systems**

The Veeam MP is verified by VMware as VMware Ready.

Veeam is an Elite VMware Technology Alliance Partner and a charter member of the VMware Ready Management program.

Veeam is a Microsoft managed partner, and the Veeam MP is installed in MTCs around the world for customer demos and proofs of concept.

The Veeam MP has been tested and verified by Microsoft and is listed in the System Center Marketplace in Pinpoint.

Features and benefits

- Get deep visibility with out-of-the-box rules and monitors, topology diagrams and reports
- Monitor relationships and dependencies among physical hosts, VMs, and applications and services
- Manage and plan for growth with new capacity planning reports
- Solve problems faster with a built-in VMware knowledge base that serves as your VMware "expert in a box"
- Increase datacenter efficiency using vSphere analysis reports to right-size your VMs and find idle VMs or garbage files

Supported Microsoft platforms

- System Center 2012 R2 Operations Manager NEW
- System Center 2007 R2 Operations Manager (and later)
- Windows Server 2012 R2 NEW
- Windows Server 2008 and later

Supported VMware platforms

- vCenter Server 4.x and later (version 5.5 NEW)
- ESX(i) 4.x and later (version 5.5NEW)

Windows Server 2012 Certified

Windows Server 2012 R2 Certified

Meet and exceed your service level agreements

With the increasing demands for 24x7 application availability, Veeam understands your need to solve problems quickly! Veeam MP gives you a deep, unified view that allows you to identify relationships and dependencies among physical hosts, VMs, critical applications and services so you can see immediately where problems are occurring and the business applications that are affected.

Having the right information, you'll be able to fix issues yourself or escalate them to the appropriate level. Using the built-in VMware knowledge base and correlated metric alerts, you'll quickly pinpoint root causes of problems, resulting in quick resolution times and an end to finger-pointing.

Take control of capacity planning

Veeam MP's capacity planning and oversized/undersized VM reports help you examine trends, perform "what-if" modeling and proactively reallocate virtual resources to manage the growth of your virtual infrastructure. Veeam MP gives you the right tools for the job.

Veeam Management Pack utilizes historical performance data to show future trends. You'll be able to see immediately when your resources could reach critical thresholds

Increase datacenter efficiencies

With Veeam MP, you can leverage your existing investment in Microsoft System Center to optimize existing IT operations processes and reduce costs. Now you can manage your virtual and physical environments from one console and avoid the expense and inefficiencies introduced by additional monitoring frameworks.

Veeam MP also lowers administration overhead with agentless monitoring and a centrally managed, highly available and load-balanced architecture. Plus, you can optimize critical IT resources with Veeam MP's new oversized/undersized VM reports.

A proven solution

Together with Microsoft System Center, Veeam Management Pack has proven itself in 1,000+ deployments worldwide. It's a scalable, reliable and mature solution that extends deep VMware monitoring, management and capacity planning to Microsoft System Center.
