CORPORATE HISTORY

In 1968, a young Billy W. Howard Sr. left his successful career at General Electric to return to his native Mississippi and create his own company – **Howard Industries.**

Over the next five decades and with the assistance of his wife, Linda, Howard Industries has grown to become a **billion dollar company** consisting of four separate divisions and a wholly-owned subsidiary, Howard Transportation.

Cleaning Protocols

Prevent the spread of germs and infectious diseases.

Prevent infectious diseases by implementing strong hygiene and infection prevention measures. Using appropriate personal protective gear, as well as effective antimicrobial and germicidal agents, significantly helps to limit the spread of viruses and other resistant airborne contagions. Stay safe with proven products and superior solutions from Howard.

Howard Acrylic Health Shields

Protective Shield & Airborne Disease Prevention Solution

Howard Health Shields act as protective barriers, shielding employees and customers from sneezes and coughs and helping to impede the spread of airborne droplets containing COVID-19 coronavirus, as well as other viruses and bacteria. These transparent protective shields are made from durable, easy-to-disinfect acrylic. They help to establish a clear measure of physical separation, reinforcing social distancing while allowing customers and employees to interact effectively.

Howard Temp Detection Kiosks

Contactless Passive Detection Temperature-Seeking Kiosks

The Contactless Howard Temperature Detection Kiosks with facial recognition help maintain a healthy environment for employees, customers, students, visitors, and the general public. These innovative gate-keeping solutions can sense the temperature of anyone who passes through its sensors, allowing you to detect those with elevated temperatures to prevent them from entering your establishment. Designed for medical and HR applications and ideal for businesses, schools and universities, restaurants, retailers, and anywhere else you want to be proactive about avoiding the spread of infection.

Wireless Connectivity Solutions

Extend Learning Past School Walls with Mobile Hotspots.

For organizations that depend on field forces and mobile networks—like first responders, transportation departments, utility crews, insurance disaster teams, and now schools—secure and reliable LTE connectivity is essential. Vehicles and mobile command centers have become the field communications hub, allowing users to access mission-critical applications and the Internet from anywhere, and keeping data flowing to the cloud from on-board telemetry, sensors, surveillance cameras, and other devices.

THANK YOU
