

Chromebook Add-Ons | Get the most out of your Chromebooks.

Individualize learning with Google Chromebooks, the budget-friendly, web-based laptops that are quickly becoming devices of choice in schools across the nation. Chromebooks are easy to manage and perfect for sharing securely, and they're simple to set up. That's because Chromebooks give you options—add-on options that increase functionality, such as device management software and automated configuration for large deployments. These and other add-on features save you time and money, increase efficiency, and eliminate entry errors.

Chromebook Deployment

Easily automate your Chromebook enrollment. Go-Box Chrome is the solution you've been looking for to automate the enrollment and configuration processes on large quantities of Chromebooks. Simply power on and connect up to 16 new Chromebooks and Go-Box Chrome automatically does the rest in a flash. The Chromebook force wipe on existing units can be automated with only a few keystrokes.

Mobile Device Management

Take control with customizable Mobile Device Management (MDM) solutions that allow you to identify and profile all devices and users on a network, for complete visibility and added security.

Chromebook Services

Make your life easier with Chromebooks and Howard support services. From asset tagging and etching to custom imaging and 'White Glove' deployment to ensure that each device is fully provisioned and ready to go—Howard can help.
