If your business requires you to manage, store, send and process data, 24/7, 356 days a year—you need a server. That is the kind of workload they're designed to handle. They include a variety of features not typically found in a desktop PC, such as dual processors, redundant hard drives or power supplies, and hot-swappable components, which allow for on-the-fly upgrades and repairs without ever turning off your system. Not only can they process data faster and more efficiently, but they also provide a scalable architecture that accommodates future expansion. Howard offers pedestal and rack-mount configurations with customizable performance options to suit your business needs.
