

Cloud Technology - Citrix

CITRIX OVERVIEW

Citrix solutions protect the government's most sensitive information on a federal, state and local level. Employees, contractors and partners have the flexibility to choose how they work with seamless and secure access to their workspace, plus the resources they need to work from anywhere. End-to-end visibility of connections, traffic and user activity allows IT to address security and compliance priorities without compromising productivity.

Citrix has developed relationships with leading industry partners to deliver apps and data securely, while building and supporting technology to incorporate best-in-class security technology across platforms.

FEDERAL GOVERNMENT SOLUTIONS

- Protect web applications from malicious threats
- Deliver a secure BYOD program by focusing on managing data
- Provide end users with consumer-like experiences to increase productivity
- Consolidate networking services and appliances
- Enhance flexibility by securely delivering mission-critical applications
- Reduce cost and manage overhead

STATE & LOCAL GOVERNMENT SOLUTIONS

- Protect confidential data
- Keep sensitive government data secure
- Grant flexible, multi-level access to authorized personnel
- Ensure desktops, apps and data are accessible before, during and after a disaster
- Provide high availability of data
- Give government workers secure access to apps as they change location, device or network
- Increase IT productivity to meet the needs of all workers
- Reduce operational costs
