Cyber Security Solutions

FRAMEWORK & VULNERABILITY ASSESSMENTS

With both an external and internal network viewpoint, our framework assessments will help to secure your IT security in line with compliance standards while protecting you from potential vulnerabilities. Our cyber security specialists help businesses and organizations to find and implement the security framework that fit their requirements in the most proficient way including:

- PCI DSS
- ISO
- NIST
- FISMA
- HITRUST (HIPAA/HITECH)

PENETRATION TESTING

Our security team has the knowledge and skills to identify a threat figure and exploit any security holes. We are able to go above your standard assessment and gain access from any security holes discovered.

THIRD-PARTY CLOUD ASSESSMENTS

Third-party cloud assessments allow you to define what security controls are in place to protect your data, where corporate data is stored, and the use of cloud applications.

SOCIAL ENGINEERING

Our team will provide valuable information about the environment and use various techniques and mediums such as:

- Email
- Phone calls
- Social networks
- Face-to-face
- Chat

Results could be important to the user since the human elements could potentially lead to leaked information being used for attacks in the future.

HOWARD™
ENTERPRISE

Physical Security Solutions

IP-based video surveillance has become the physical security solution of choice. It deters crime, violence, and other misbehavior, and it stretches your security budget by allowing you to monitor more locations with fewer personnel. Let Howard help you secure your facility. We offer everything from network cameras and video management software to complete systems—all easy to install, simple to operate, and readily adaptable as your needs change.

VIDEO SURVEILLANCE

Video Surveillance end points can function as extra eyes and ears across your organization. They can act as silent sentinels to alert, detect, deter and document incidents. Best of all, Video Surveillance cameras act as force multipliers, giving you the ability to be virtually in more than one place at a time.

DISPLAYS

Let Howard help you choose the right displays to outfit your Security Operations Center, control rooms or anywhere you need a virtual window into your world. We can help you balance your physical space, feature needs and budget to give you the best options.

SUPPORTING INFRASTRUCTURE

Howard can help you manage the network infrastructure needs associated with installing and updating your Physical Security estate. We can set you up with routers, switches, WAPs, cellular modems, cabling, encoders, servers, storage devices and more. From small to large scale, we have you options for you.

CONTROL SYSTEMS

Think of them as smart locks, our Access Control systems can help limit access to restricted areas and track employee movement. Whether key-pad operated or RFID you can tie in your access permissions with Active Directory and other third-party applications or manage them manually.

VIDEO STREAMING

Streaming video from your VMS can help you turn any computer or mobile device into a Security Operations Center. You can apply permissions to make sure only people authorized to see a given feed can view it.
