

Patient Check-In Kiosk Solutions

Maximize patient engagement; streamline check-in processes, increase point-of-service collections, and more with Howard's patient check-in kiosk solutions powered by Dell. They are self-service solutions that give your patients a measure of control. Our highly versatile kiosks can work with nearly any software platform, giving you and your facility the freedom to customize your kiosk to best fit your facility's workflow and maintain facility standards. Patients check-in without requiring assistance or having to wait in line. They update their own registration information. They pay co-pay amounts, sign documents, and print receipts. In fact, the more functions a kiosk can offer to check-in patients, the less manual registration work the front desk employees have to perform. This patient-centric approach to healthcare means that care teams spend less time dealing with administrative duties and more time providing care for patients.

- Reduces patient wait times
- Reduces staffing requirements
- Reduces administrative costs
- Gives patients a measure of control
- Eliminates front desk congestion
- Minimizes data entry errors
- Ensures transaction privacy
- Accelerates collection
- Generates significant ROI

Freestanding Kiosks

Our freestanding kiosks are ideal for use in a variety of medical applications. The W-series kiosks are self-service units that are most commonly used for check-in and payment processing, but can be used for multiple functionalities. This standalone multimedia platform includes a built-in PC with a user-friendly interface that allows the system to guide customers easily through automated processes.

Tabletop Kiosks

Tabletop kiosks are ideal for use in a variety of medical applications. They are less expensive than full-size models and much easier to move from one location to another, as needs dictate. Automation is transforming the way we do business. Let Howard show you how.
