

RevScan Flex

Temperature Sensing KIOSK

Howard **RevScan Flex** Tabletop/Tripod Temperature Sensing Kiosk

Temperature checks for employees, students, or visitors, are your first line of defense in maintaining a healthy environment. Getting set up to do it is simple. All it takes is a laptop with the right cameras and software, and Howard has it! It's called the RevScan Flex. Howard's RevScan Flex offers two cameras—one, a high-end, thermal sensing camera; the other is Intel's RealSense™ D415 camera, which features high-depth resolution and active infrared (IR) stereo with standard or wide-field view. To ensure operational compliance, 22MILES TempDefend thermo-sensing software is used. It captures analytics and records, tracks, and responds according to your specifications.

Help safeguard your establishment from infection with kiosks from Howard and software from 22Miles

The RevScan Flex takes up a minimal amount of space, while it unobtrusively and simultaneously scans people—up to as many as 10 at a time; at a distance of up to 15 feet—and displays their temperatures on the screen as they walk up. The RevScan Flex is ideal for a receptionist's desk, at an employee entrance, or somewhere you might prefer to be discreet about temperature sensing.

Kiosk Package

- Enclosure & Stand
 - Antimicrobial
 - Powder-coated
 - Cold-rolled steel
