

# Auditor

Real-time email, Docs, and Drive scanning with  
AI-based notifications for nudity, bullying, self-harm, and violence

Auditor uses the most sophisticated AI engine in student safety to scan Google and Office 365 emails, Docs, and Drive in real-time. Get alerts based on context, not just keywords.

## Features

### Google Docs and comments

Live documents can be used for spreading rumors, passing notes, or penning final farewells. Auditor scans for signs of bullying, self-harm, and violence, letting you know immediately when a student is in crisis.

### Files on Drive

Nudity detection for files stored in Google Drive keeps inappropriate photos away from innocent eyes.

### Emails and attachments

Nudity detection for Gmail image attachments, with scanning for signs of bullying, self-harm, and violence in Gmail and Office 365 email content.

### Delegated admins

Delegate by group or organizational unit (OU) so alerts go to the staff members closest to the student in crisis.

### Confidence scores

Securly's AI assigns a confidence score to every notification. You pick the confidence scores you want to get notifications for.

## 24 for Auditor

Don't let critical alerts get buried in your inbox. Our team of highly-trained specialists review flagged activity, 24/7. Pair 24 with Filter, Auditor, and Tipline for the most complete student safety solution on the market.
