

# EPS 42

## Epaper Desk Signs

Show reservations for desk and workspace hoteling in hybrid offices.

- Show desk availability and upcoming reservations right at the workspace
- Easily mount on desks, workstations, partitions, walls and glass
- Affordable, wireless and battery-powered for three years or more
- Display QR codes to let people book space or check in at the sign
- Black, red and white ink for onscreen text, logos, QR codes, etc.

Visix HQ is a hybrid office, so we understand the needs of both facility managers and employees when it comes to shared space booking and the workplace experience.

Our epaper desk signs are the most cost-effective option to display current reservations for desks and other shared workspaces – an inexpensive, wireless and battery-operated solution.

Show real-time reservations to let employees see if a workspace is free or reserved, and quickly locate their teammates. Display QR codes so people can use their personal devices to book spaces, check in or browse out to your booking system. Whether you want to show workspace names, reservations, QR codes, or logos and branding, our EPS desk signs are fully customizable, and we offer a variety of screen templates to get you started.

Epaper signs have a bright display background with low reflectivity for high readability, and allow for black, white and red colors on screen. The room signs are updated wirelessly via RF communication designed to minimize battery usage. A sign's batteries are only activated when information changes, so batteries to last up to three years or 10,000 updates.

Calendar changes are delivered to EPS desk signs throughout the day without any user intervention. EPS desk signs show data from most scheduling systems, including:

## How it works

Our Conference application pulls together schedule data from a variety of calendar programs, taking care of integration with the scheduling system you're already using. It supports multiple space booking systems – and multiple instances of those systems – in the same installation, so it can easily support multiple systems across an organization.

EPS Management software applies reservation data to selected templates and pushes updates to epaper desk signs via RF transmitters. The software can also be used to check the status of desk signs, check battery power levels and to deploy additional signs.

Our epaper desk signs already have a modern, elegant bezel, but custom architectural surrounds are also available with custom graphics and labeling. We can provide templates to choose from or you can completely customize your faceplates from scratch to match your brand or décor.

EPS desk signs can be used in conjunction with other Visix room signs and digital signage products, or as a completely stand-alone solution.

### EPS 42 Desk Sign

Display size: 3.3 x 2.5 inches E Ink paper-white bistable EDP

Resolution: 400 x 300 (4:3 aspect ratio)

Orientation: Portrait or Landscape

Dimensions: 3.9w x 3.3h x 0.5d inches

Weight: 3 oz.

Power: 4 ea. CR2450 batteries

Mounting: 3M Command Strips

Faceplate: No frame included; custom faceplates available

### EPS RF Transmitter

Dimensions: 6.2w x 4.5l x 1.4h inches

Power: 1 x 10/100Mbit Ethernet port, Industry standard IEEE 802.3af PoE specification

1 x DC power input (optional)

RF Communication: IEEE 802.15.4a compliant

RF Frequency: 915MHz ISM Band 2-way wireless

LEDs: Power, connection and Ethernet activity

Mounting: Integrated Wall/Ceiling Mount

Note: Conference and EPS Management applications require a PC running Windows Server 2016 or better and 8GB memory.
