

Rugged Telehealth Kits (RTK 19 and 22)

RTK 19

The RTK 19 kit is a smaller version of our full size kits. It features an integrated tablet PC with built-in webcam, rugged fold-out keyboard, and removable USB speakerphone. Four available USB ports power peripherals using the tablet's built-in battery. All our kits feature custom foam inserts that protect and secure a variety of peripherals, such as a multi-purpose exam camera with swappable lenses, stethoscope, electrocardiogram, pulse oximeter, and more.

RTK 22

The RTK 22 is an IP-rated, rugged, hard-shell case with retractable handle and wheels for easy transport. Inside, you will find a tablet PC with tilt adjustment, a high-def, USB webcam on an articulating arm, an integrated speakerphone, a rugged fold-out keyboard, and an I/O panel that provides connectivity for peripheral devices. An integrated lithium ion battery pack powers the peripherals when off the grid.
